

# Problem Solved

A RIVER ROOK SOFTWARE SOLUTION: STRING COMMANDER

## Small but Powerful:

New from River Rook Software, String Commander is a communications protocol converter software that converts telnet protocols into Modbus data. String Commander negotiates complex data transactions between common serial devices and industrial systems using Modbus.

Developed using River Rooks Software's Checkmate Platform, String Commander is a giant leap forward in connectivity, bringing standard and custom serial protocols in reach of mainstream use within industrial equipment.

Easy to configure and deploy, String Commander is compatible with Windows based systems. Check out our demo at [riverrook.ca](http://riverrook.ca).

Convert simple  
request /  
response  
protocol data  
into Modbus  
data

Convert simple  
request/response  
protocols into  
Modbus actions  
(read/write)
